THE JTI FOUNDATION

Training of Trainers

Certificate Program on Business Continuity
Planning (BCP) for SMEs

Module 3 Part 3.1: Protection and Mitigation

18-21 February 2014
The Sukosol Hotel
Bangkok, Thailand

Module 1: BCP Framework

Part 1.1: Importance of BCP

Part 1.2: BCP Framework

Module 2: Risk Identification

Part 2.1: Prioritized Activities and Recovery

Time Objective

Part 2.2: Necessary Resources for Recovery

Part 2.3: Business Risk Assessment

Module 3: Business Resumption Strategies

Part 3.1: Pre-disaster preparedness and mitigation for SMEs

Part 3.2: Immediate Survival from Disruption

Part 3.3: Business Continuity Strategies

Module 4: PDCA (Plan-Do-Check-Act) Cycle

Part 4.1: PDCA Exercise

Part 4.2: BCP Peer Review (Management Review)

Step 5: Protection and Mitigation

This phase involves the protection (prevention) or mitigation of the damage caused by an incident so that Prioritized Activities can be resumed quickly in accordance with their RTOs.

Protection and mitigation measures primarily consist of **pre-incident measures**, but can also include important **post-incident measures** intended to contain and minimize damage.

Before, During & After

Protection & Mitigation

Incident Response

Continuity / Recovery Options

(for an earthquake)

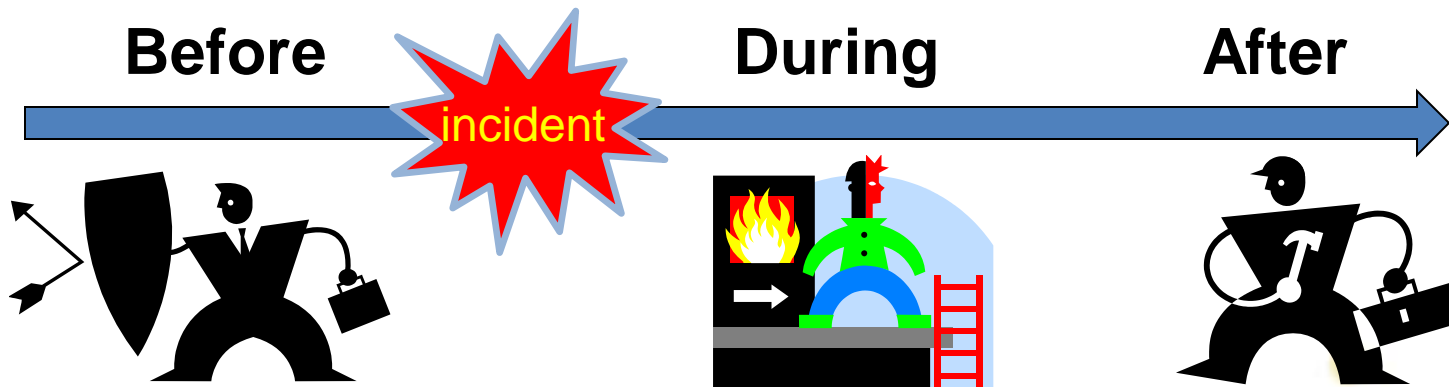

- Seismic reinforcement of structures
- Installation of equipment restraints
- Data back-up •

- Evacuation
- Confirmation of employee safety
- EOC mobilization

- Relocation to alternate site
- Recovery at affected site
- Workaround options
- Outsourcing

- return to normal operation

BC Strategies 3 phases

- **Before: Protection and mitigation**
 - protect (prevent) or mitigate damage caused by an incident
- **During: Emergency response**
 - stabilize the situation, eliminate danger
 - Protect your people, assets, and business operations.
- **After: Continuity and recovery strategies**
 - plan and implement strategies for early resuming Priority Business

You will identify the necessary measures for your company in consideration of these three phases

Why pre-disaster measures are necessary?

- Minimize damage to be able to resume key business at planned (to achieve RTO)
- Understand what prevents your company from early recovery
 - Building collapsed
 - Damaged key equipment needs one year to repair
- Plan in short-term and mid/long term strategies

Protection and Mitigation

For example

- Earthquake resistant diagnosis
- Anti- earthquake Reinforcement of buildings
- Fixation of equipment & furniture
- Anti-flooding; to move important equipment upstairs
- Anti-leakage measures; pipe bursts
- Disaster emergency stocks for employees overnight stay

Form 4-2 Resource Damage Estimate Sheet

Risk		Northern Tokyo Bay Earthquake	Assumed recovery period						Need measures	
Assumed damage		E/Q Intensity Lv5 (+) hits the region. The company sustains damages to various resources which disrupts its operation.	Day	Day (shown by graph)						
Necessary resources		Damage		3 ds	1 wks.	2 wks.	1 mo	2 mos.	3 mos.	
Internal Resources	Building	Main factory – no damage to the structure, but walls crack ,ceiling fall, pipeing damaged	25	[Bar chart showing recovery from Day 25 to Day 30]						◎
	Equipment Machinery	no severe damage but machines moves and need adjustments	30	[Bar chart showing recovery from Day 30 to Day 30]						◎
	Inventory	finished products and materials fall from shelves	30	[Bar chart showing recovery from Day 30 to Day 30]						◎
	People	30% staffs can not come to work	2	[Bar chart showing recovery from Day 2 to Day 2]						
	IT System	IT servers fall	10	[Bar chart showing recovery from Day 10 to Day 10]						
	Fund									
	(other)									
Essential Social Services	Electricity	disrupted for one day	1	[Bar chart showing recovery from Day 1 to Day 1]						
	Gas									
	Water	no disruption								
	Phone Communication	disrupted for one day	1	[Bar chart showing recovery from Day 1 to Day 1]						
	Traffic / Roads	no disruption								
	(other)									
Supply	Direct suppliers	material supplies may stop for 2-4 weeks	14-30	[Bar chart showing recovery from Day 14 to Day 30]						○
	2nd, 3rd Suppliers	material supplies may stop for 2-4 weeks	14-30	[Bar chart showing recovery from Day 14 to Day 30]						○
	Customer									
	(other)	repair companies of molding machines may delay to respond	10	[Bar chart showing recovery from Day 10 to Day 10]						○

Recovery time objective : 2 weeks

Form5-1 Protection and Mitigation Measures for Key Resources

Resources	Objectives	What To Do	Your Plan	Implementation Deadlines			Department in Charge
				Immediately	Within 1 year	Mid to Long Term	
Building	Earthquake diagnosis	Check earthquake resistance levels of the main buildings	Identify resistance levels and where reinforcement or other measures are needed	X (diagnosis)	X	X	Facility Dept.
	Fire Protection	Check of the current anti fire measures are sufficient	Identify where anti fire protection measures are needed or to be improved.		X	X	
Machines Mold and die	Prevent fall-over from earthquake	Check where fall-over risks exist.	Identify where and what protection measures are needed	X (investigation)	X		Production Dept.
IT hardware	Protect IT hardware from earthquake damage	Check where fall-over risks exist.	Install restraints to prevent IT hardware from falling over t servers at headquarters in a server rack				IT Dept
Inventory	Prevent inventory from falling at earthquake	Check if the current storage is safe and prevents fall-over	Identify where and what preventive measures are needed	X (investigation)	X		Production and Logistics Dept.
